Design & Manufacturing
of Surface Finishing
Machinery

Facilities

Barberan is comprised of several facilities, housing a total of six workshops dedicated to the manufacturing of machinery. What sets Barberan apart from other companies is its beginning-to-end manufacturing process. We consistently tailor our processes to meet client requirements, ensuring a swift adaptation in manufacturing to satisfy their needs. This approach allows clients to enter the market with their own customized machines, providing a beneficial starting point compared to competitors.

Production Processes

01. Main Warehouse.

02. Warehouse & reception of raw materials.

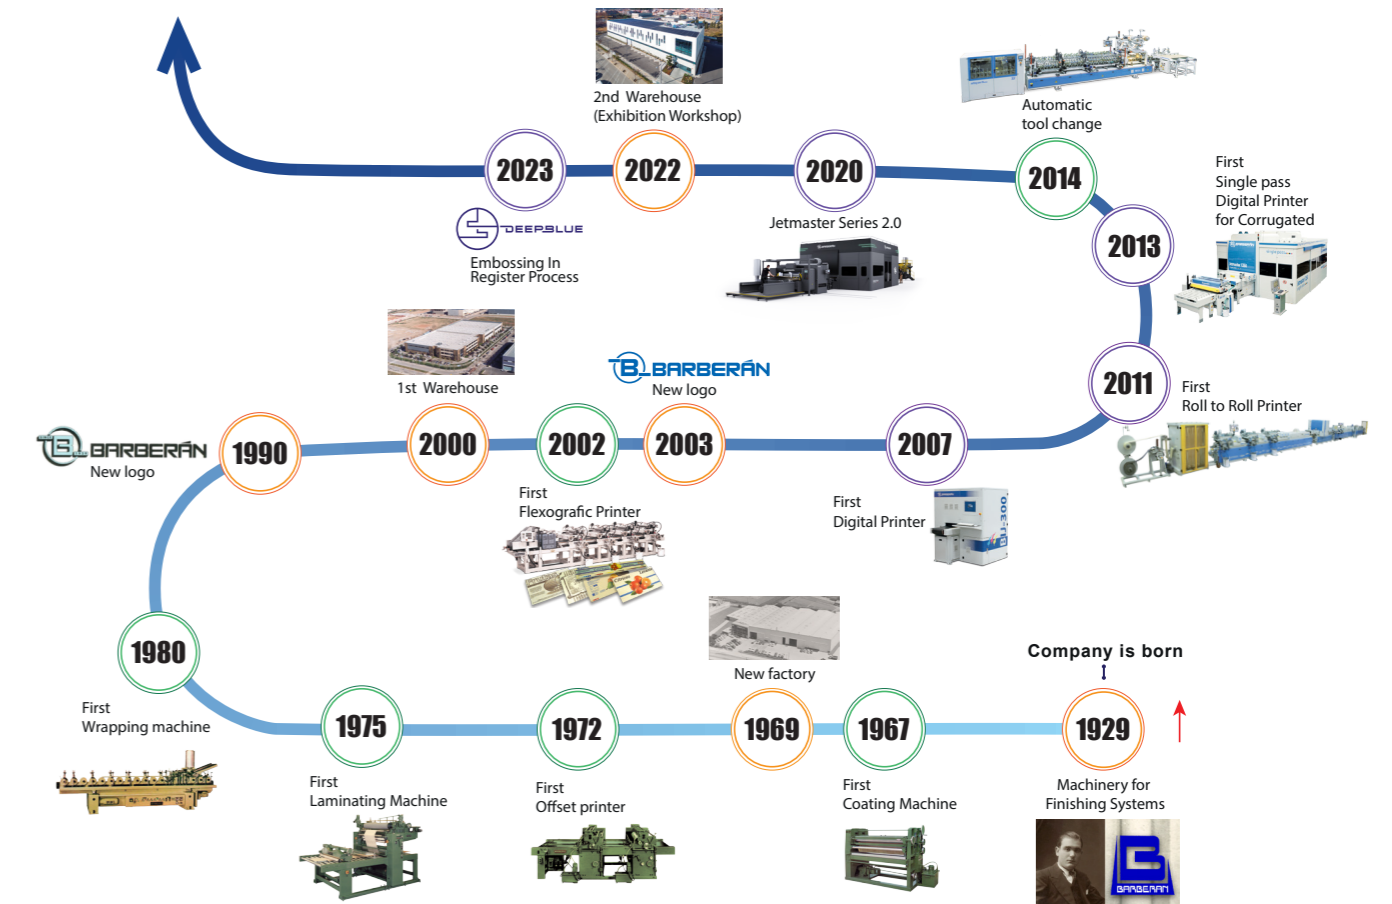

03. R&D Lab Inkjet Section.

Evolution

For almost two decades, Barberan has been designing and manufacturing cutting edge machinery for different market segments. Continuous development and usage of latest technology keeps Barberan's divisions at the forefront of all markets.

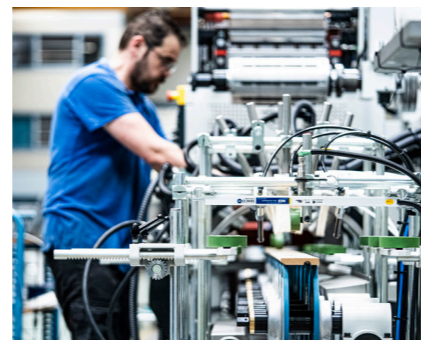

07. Painting / Cutting / Machining.

08. Electrical section.

09. Warehouse & order preparation.

04. Machined section.

05. Assembly and welding.

06. Machanized ship.

10. Specialized assembly on a prod. line.

11. Test Room - varnishing & digital printing.

12. Cargo section.

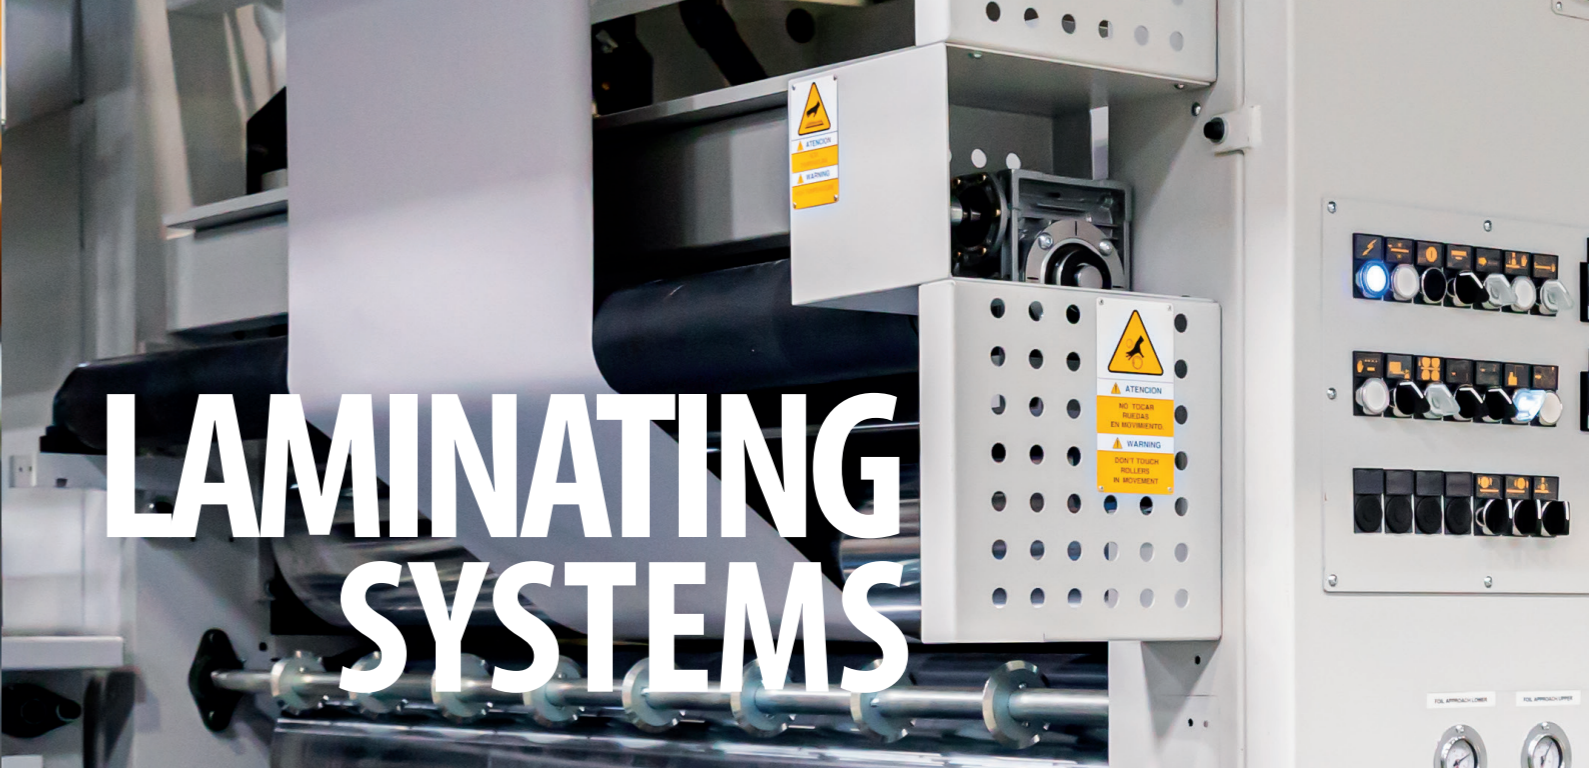

WRAPPING MACHINERY

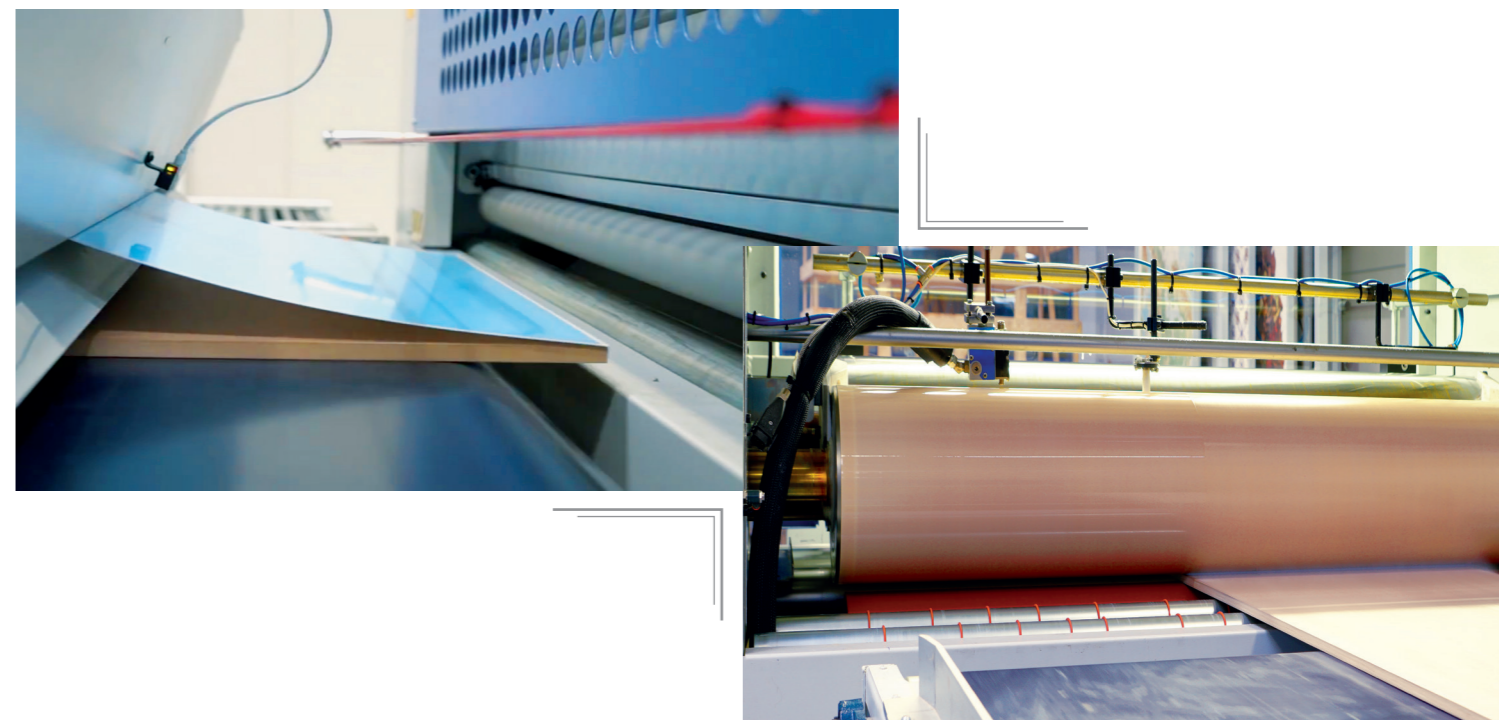

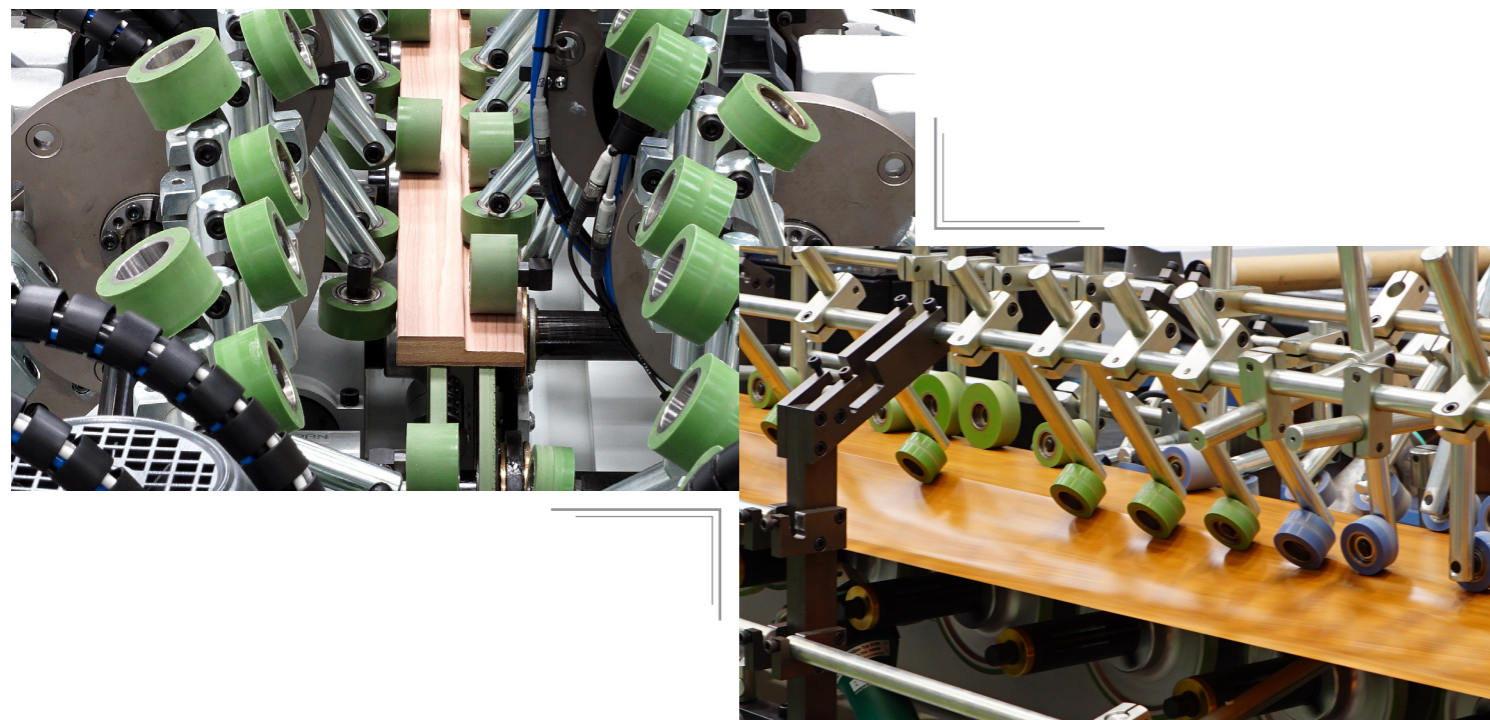

Barberan's modular system allows the composition of profile wrapping lines made of wood, particleboard, HDF, MDF, aluminum, PVC etc. to be wrapped with wooden veneer, paper, thermoplastic foils etc. using a sequence of independent modules and offering multiple different compositions which can be adapted to each manufacturing process.

LAMINATING SYSTEMS

Flat or 2D lamination, postforming, panel gluing... Options for a wide variety of materials and adhesives. At Barberán, you can find machines that most suit your production needs: from compact laminators to high performance continuous production lines. We explore with different materials and develop the most efficient machinery to work under the most optimum conditions.

COATING LINES

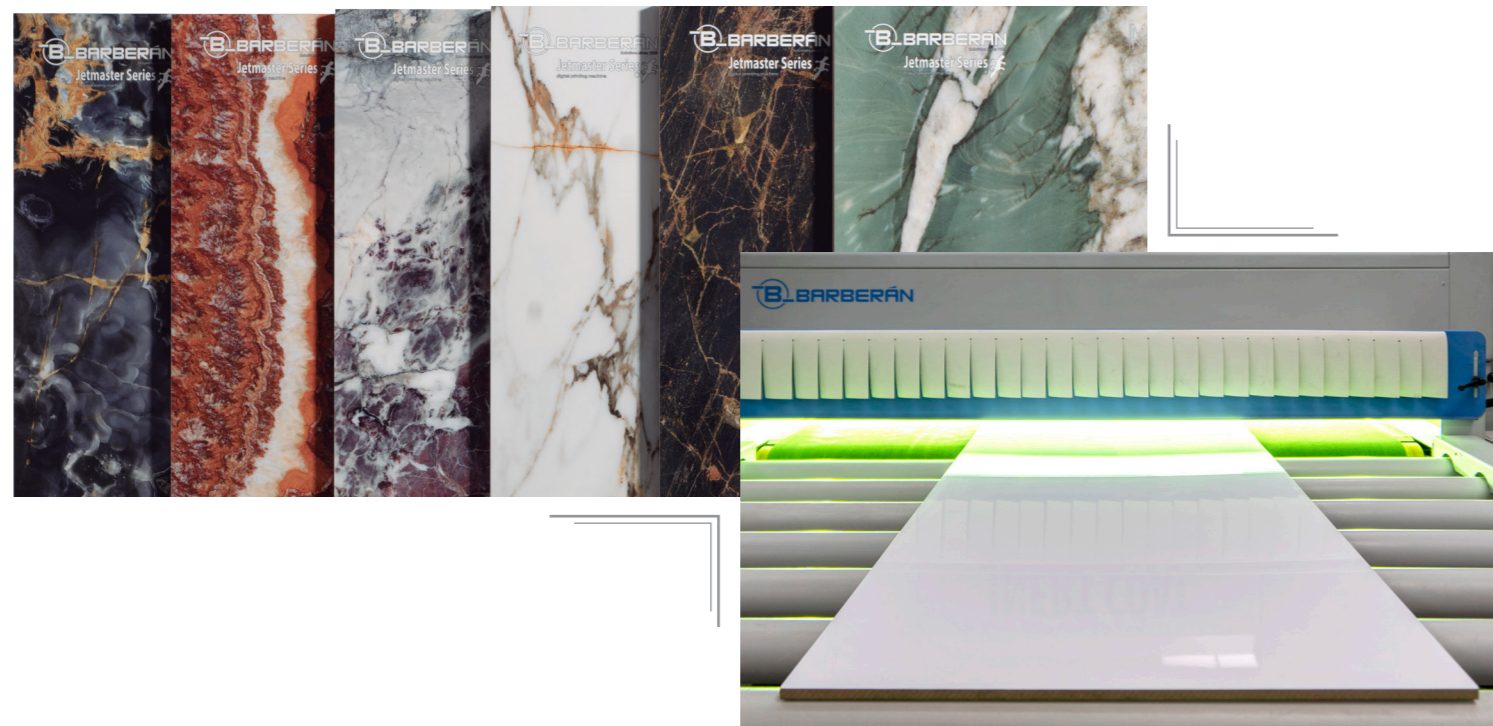

Barberan offers the most appropriate lacquering method for each type of surface. The machines are designed and adapted to different lacquering requirements (curing, sanding, gloss, adhesion, hardness...) to offer you the best choice of process and application, reliability and the highest quality finish.

DIGITAL PRINTING Single Pass

For almost two decades, Barberan has been at the forefront, leading the introduction of single pass digital printing technology into the corrugated industry, as well as in many other industrial sectors like deco, flooring with DeepBlue digital texturing technology and signage & display industry; featuring stationary inkjet printheads that allow a direct, contactless printing of digital images onto multiple types of substrates.

Bright Future

Barberan's latest addition is the new Exhibition workshop, where long and extensive production lines will be presented to customers. This allows them to experience the look and operation just before shipping it to their company. This recent innovation ensures that our clients receive the best treatment, allowing them to witness how important their satisfaction is to Barberan.

After Sale

A centralized system for the machinery that has already been sold. This data analysis provides detailed insights into the status and performance of the machine from anywhere and at any time. Service Desk goes beyond that. Barberan's objective is not only to satisfy but also to work hand in hand with our customers through a new service-oriented platform. It is based on incident management and spare parts ordering to facilitate and streamline each case in the most optimal way.
